АТМОСФЕРА ЗЕМЛИ ВЕРХНЯЯ

Модель химического состава

ГОСТ

Earth upper atmosphere. Chemical composition model

25645.154—90

ОКСТУ 0080

Дата введения 01.01.92

Настоящий стандарт устанавливает модель химического состава верхней атмосферы Земли на высотах от 80 до 800 км для различных гелио-геофизических условий.

Стандарт предназначен для разработки и обеспечения нормального функционирования космических систем, а также систем наземного базирования, надежная работа которых требует информации о состоянии околоземного космического пространства.

Требования настоящего стандарта являются обязательными.

1. ОСНОВНЫЕ ПОЛОЖЕНИЯ И ФОРМУЛЫ ДЛЯ ОПРЕДЕЛЕНИЯ ХИМИЧЕСКОГО СОСТАВА ВЕРХНЕЙ АТМОСФЕРЫ ЗЕМЛИ

1.1. Модель химического состава верхней атмосферы построена на основе обобщения и анализа мировых субспутниковых данных по масс-спектрометрическим измерениям состава атмосферы Земли с использованием для аппроксимации этих данных на меньшие высоты теоретического моделирования и результатов ракетного зондирования. Теоретическое моделирование атмосферы проводилось методом численного интегрирования системы уравнений квазигидродинамики в приближении Навье — Стокса (уравнение непрерывности, движения и энергии) для многокомпонентной смеси и позволило построить высотные распределения температуры и концентрации основных нейтральных составляющих верхней атмосферы: молекулярного азота, молекулярного и атомарного кислорода для различных гелио-геофизических условий, используя в качестве граничных условий спутниковые данные.

Издание официальное

© Издательство стандартов, 1991

Настоящий стандарт не может быть полностью или частично воспроизведен, тиражирован и распространен без разрешения Госстандарта СССР

Метод численного интегрирования основан на замене переменных, приводящей исходную систему уравнений неразрывности многокомпонентной диффузии и теплового баланса к совместной системе уравнений параболического типа соответственно для компонент O , O_2 и N_2 , решаемую конечно-разностным методом с применением потокового варианта метода прогонки, который позволяет получать устойчивое решение.

1.2. Модель химического состава верхней атмосферы представлена в табл. 1—28 в диапазоне высот от 80 до 800 км с шагом 10 км. Приведенные в табл. 1—28 данные соответствуют конкретным значениям индексов солнечной и геомагнитной активности. В качестве индекса солнечной активности используется величина потока радиационного излучения Солнца с длиной волны 10,7 см (F), выраженная в общепринятых условных единицах. Представлены данные для трех уровней солнечной активности: низкого, среднего и высокого ($70 \cdot 10^{-22}$ Вт/м²·Гц; $150 \cdot 10^{-22}$ Вт/м²·Гц; $200 \cdot 10^{-22}$ Вт/м²·Гц).

В табл. 1—28 представлены также данные, соответствующие разным условиям геомагнитной возмущенности, характеризуемой индексом A_p . Спокойные условия соответствуют $A_p = 3$ и сильно-возмущенные условия $A_p = 100$.

1.3. Для разных уровней солнечной и геомагнитной активности представлены широтные и сезонные вариации для местного полудня. Пример суточного хода дан для средней солнечной активности и спокойных геомагнитных условий в табл. 25—28.

Изменение химического состава в зависимости от широты приведено в табл. 1—24 для широт 0 , 40° , 80° , -40° , -80° (знак минус указывает на южную широту).

1.4. Относительное содержание i -ой составляющей определяют по формуле

$$n_i = \frac{n_i}{S}, \quad (1)$$

где n_i — абсолютная концентрация i -ой составляющей;

S — полная концентрация частиц ($S = \sum_{i=1}^{\sigma} n_i$).

Абсолютная концентрация i -ой составляющей может быть определена по данным ГОСТ 25645.102 и настоящего стандарта из следующего соотношения

$$n_i = \rho n_i \frac{1}{\sum_{i=1}^{\sigma} m_i n_i}, \quad (2)$$

где ρ — плотность;

m_i — молекулярный (атомный) вес i -го сорта частиц.

2. ТАБЛИЦЫ ПАРАМЕТРОВ ХИМИЧЕСКОГО СОСТАВА ВЕРХНЕЙ АТМОСФЕРЫ ЗЕМЛИ

2.1. В табл. 1—28 приведено выраженное в процентах относительное содержание основных составляющих верхней атмосферы: гелий (He), аргон (Ar), кислород (O и O₂), азот (N₂), водород (H).

2.2. Все данные приведены для одной долготы (LON) 45°.

2.3. Для определения промежуточных значений параметров рекомендуется использовать обычную процедуру осреднения.

2.4. Для каждой таблицы кроме текущего значения индекса *F* приводится осредненное за 90 дней значение (*FAV*).

2.5. Перевод всемирного времени в звездное проводят по РД 50—25645.325.

2.6. Кроме приведенных выше обозначений в таблицах имеются следующие:

LAT — ширина, град;

z — высота, км;

D — номер дня в году;

LT — местное время, ч;

UT — всемирное время, ч.

ИНФОРМАЦИОННЫЕ ДАННЫЕ

1. РАЗРАБОТАН И ВНЕСЕН Государственным комитетом СССР по гидрометеорологии

РАЗРАБОТЧИКИ

С. И. Авдюшин, д-р техн. наук; Г. Ф. Тулинов, канд. физ.-мат. наук (руководитель темы); М. Н. Власов, д-р физ.-мат. наук; А. А. Похунков, канд. физ.-мат. наук; В. Е. Давыдов, канд. физ.-мат. наук; А. Г. Федоров, канд. физ.-мат. наук; Н. И. Канцерская; И. И. Собельман, д-р физ.-мат. наук; Б. Ф. Гордиец, д-р физ.-мат. наук; Ю. Н. Куликов, канд. физ.-мат. наук; А. Н. Степанович, канд. физ.-мат. наук

2. УТВЕРЖДЕН И ВВЕДЕН В ДЕЙСТВИЕ Постановлением Государственного комитета СССР по управлению качеством продукции и стандартам от 27.12.90 № 3388

3. Срок первой проверки 1995, периодичность проверки 5 лет

4. ВВЕДЕН ВПЕРВЫЕ

5. ССЫЛОЧНЫЕ НОРМАТИВНО-ТЕХНИЧЕСКИЕ ДОКУМЕНТЫ

Обозначение НТД, на который дана ссылка	Номер пункта
ГОСТ 25645 102—83	1.4
РД 50—25645.325—89	2
